Retail, Hospitality & Display Lighting

Compact Lighting Ltd. designs and manufactures a complete range of products to create premium lighting solutions for Retail, Hospitality and Display environments. From our state of the art, purpose-built factory in Portsmouth, we supply lighting solutions to many of the UK's top retailers for both local and international outlets.

Established in 1991, Compact Lighting is a wholly-owned subsidiary of one of the UK's most exciting and successful lighting manufacturing groups, the blue-chip

FW Thorpe PLC, founded itself in 1936.

For this showroom we took our comprehensive product portfolio and teamed up with Desso, a world leader in commercial carpets and flooring, to provide lighting solutions for their showroom in Clerkenwell, London.

For this project, we also worked with partner manufacturers, including Philips, Form, Nomique Seating, Egger and Fusion to help provide a modern multi-functional space showcasing all the partners' products.

The benefits of LED

Our lighting solutions in the Desso showroom are LED. There are many benefits to using LED technology. We explore the top five here:

1. Longer life

LED solutions often last much longer than traditional lamps, meaning they are cost effective thanks to fewer refits and less maintenance.

2. Energy efficient

LED solutions generally use less power consumption than traditional lamps, saving both money and the environment.

3. Environmentally friendly

LEDs contain no harmful environmental pollutants like lead or mercury and are easily recyclable.

4. Safer

With reduced heat output, LED solutions are a lot safer to use. Additionally a lower heat output reduces the workload of air conditioning systems, increasing energy savings even more.

5. Colour changing

Modules containing different coloured LEDs (typically red, green and blue) can be tuned to a huge range of colours and easily dimmed, giving you reliability and increased flexibility to achieve bespoke solutions for the most discerning application needs.

The suspended HIBar over the bar acts as a great feature light.

Downstairs, the flush recessed HIBar fills the space with ambient lighting to keep with the clean design.

Our suspended Colourbright Pendant has a medium sized form factor and is complete with integrated frosted glass and post anodised reflectory coating, creating a low glare impression.

Our MiNA Circle is our standard recessed spotlight. Ideal for any application with its subtle size and great output.

Our suspended MiNA Gimbal allows for more flexibility than a recessed MiNA whilst still giving a fantastic, directional output.

Our Scope, seen here as a recessed solution but also available on track and surface mounted, offers real versatility and can be fully recessed as a downlight or extruded as a directional spotlight.

Our recessed F4 offers a broadspread distribution from a large form factor downlighter. With an unimposing design it is ideal for ambient lighting.

Our track and surface mounted Pitch spotlight is adjustable to fit any application and available with vertical and horizontal gear housing.

The Ambit is a great ambient downlighter for any application, especially offices. Seen here paired with our recessed Scopes to highlight Desso's sample tiles.
